CHALLENGES IN LEARNING AND TEACHING SOFTWARE MODELLING: A SOCIO-TECHNICAL GROUNDED THEORY APPROACH

YAROSLAV HAYDUK

Bachelor in Computer Science and Engineering

Adviser: Miguel Goulão
Professor, NOVA University Lisbon

Co-adviser: Grischa Liebel
Associate Professor, Reykjavik University

ABSTRACT

Regardless of the language in which the dissertation is written, usually there are at least two abstracts: one abstract in the same language as the main text, and another abstract in some other language.

The abstracts' order varies with the school. If your school has specific regulations concerning the abstracts' order, the NOVAthesis L^AT_EX (`novathesis`) (L^AT_EX) template will respect them. Otherwise, the default rule in the `novathesis` template is to have in first place the abstract in *the same language as main text*, and then the abstract in *the other language*. For example, if the dissertation is written in Portuguese, the abstracts' order will be first Portuguese and then English, followed by the main text in Portuguese. If the dissertation is written in English, the abstracts' order will be first English and then Portuguese, followed by the main text in English. However, this order can be customized by adding one of the following to the file `5_packages.tex`.

```
\ntsetup{abstractorder={<LANG_1>,...,<LANG_N>}}  
\ntsetup{abstractorder={<MAIN_LANG>={<LANG_1>,...,<LANG_N>}}}
```

For example, for a main document written in German with abstracts written in German, English and Italian (by this order) use:

```
\ntsetup{abstractorder={de={de,en,it}}}
```

Concerning its contents, the abstracts should not exceed one page and may answer the following questions (it is essential to adapt to the usual practices of your scientific area):

1. What is the problem?
2. Why is this problem interesting/challenging?
3. What is the proposed approach/solution/contribution?
4. What results (implications/consequences) from the solution?

`novathesis` NOVAthesis L^AT_EX (*p. i*)

INTRODUCTION

BACKGROUND

- 2.1 Software modelling & conceptual modelling**
- 2.2 Modelling education (conceptual, process, goal, UML, MDE)**
- 2.3 Grounded Theory**
- 2.4 Bloom's Taxonomy and learning outcomes**
- 2.5 Human factors in modelling and SE education**

RELATED WORK

- 3.1 Empirical studies on learning/teaching specific modelling frameworks (iStar, UML, data models)**
- 3.2 Broader SE education work on experience, competencies, experiential learning**
- 3.3 Existing theories/frameworks (CaMeLOT, Domain Modelling in Bloom, etc.)**

METHODOLOGY

- 4.1 Bloom-based RQs**
- 4.2 Grounded Theory & STGT**
- 4.3 Survey design**
- 4.4 Data collection & analysis**
